Global News

Retrofit trends and tailored solutions from manroland Goss web systems for the newspaper printing market

Every Printing house is sooner or later faced with the decision: retrofit or new investment? manrolandGoss has developed solutions as part of its Smart Retrofit Solutions program which makes it possible to upgrade individual sub-areas or to raise them to current state-of-the-art technology. The team of experts accurately determine what fits the business model best in each separate case, through individual consultation sessions.

Maintellisense, the intelligent system platform from manroland Goss delivers better overviews and increased efficiency in print operations

The digital transformation with Big Data, Smart Data, AI, Machine-Learning or Neuronal Networks, just to mention a few promising technology fields, is profoundly altering the daily production routine in the printing sector. Maintellisense, the in-house developed service platform from manroland Goss is the combination of the terms Maintenance, Intelligence and Sense, shortened to Maintellisense, embodies the understanding of the web offset specialists from Augsburg of Service Solutions 4.0, in just one word. The focus of Service today lies in the development of practicable applications for the Next Generation, which optimise the production processes via the deployment of intelligent technologies, increase the systems efficiency and thereby sustainably reduce the total costs.
